Hi Sally, some of the videos here may not be just as good as the one you are looking for because I am not a professional video editor. So if you find some video you are interested in, you can click on the relevant tab, then click on the video, and right-click on the video and select "save as", and I think it will save to the clipboard for you to paste into here if you want. Hope that helps.

Hi michigango - the .5v for the Ziptron is slightly too high for the 12VDC supply for the floppy. As I say, I haven't played with mine, but I would expect it to work OK. Your floppy is running 12V, so it doesn't need a voltage drop, just the 12V supply to the floppy drive. Hope this helps - I can't be sure it will work without more info about your Ziptron, though. I am finding it difficult to get hold of anything decent on Amazon.co.uk - any recommendations for a chinese site would be gratefully received.

Hi Pete, you have the arduino source code for each of the small grippers you want on your board. However, you will need to have a bit of soldering experience to get it working. You will need to program the firmware into the microcontroller, to change the direction of the motor, etc. You might be able to find instructions for this on the forum, but in the mean time, you could look at other people's projects, or even buy a ready-made version. The bq Freetronics version, for example, will already be programmed, so you will just need to plug it in. My understanding is that you can use another microcontroller (the Atmel SAM3X8E ARM Cortex-M0) and a quadrature encoder to do the same thing, with a better resolution, using the same motor driver chip, so that you get more turns of the motor. I haven't tried this though. So many people seem to struggle with this. I just spent a few days trying to source a Ziptron and couldn't find one. I did find a number of ones that worked in reverse on eBay, I think the problem was they were trying to sell them at this stage. Hi Zircon, I've been building a number of versions of this - I've been thinking about making it a good deal cheaper - 82157476af
